

Statistics and Experimental Design for the Biomedical Sciences

MCP8050C Spring Semester 2022 Syllabus & Schedule

Statistics and Experimental Design for the Biomedical Sciences is a practical course designed to provide students with a solid foundation and intuitive understanding of statistics for the biomedical sciences. The course covers key concepts and methods. The course covers best practice in experimental design and statistical analysis, ensuring scientific rigor and reproducibility. The course emphasizes parametric and nonparametric statistics used in making between-group inferences, linear and nonlinear regression used in modeling physiological phenomena, effective data presentation, transparency, and graphic integrity.

Instructors Course Director: Bryan Mackenzie, PhD • Email: bryan.mackenzie@uc.edu
Tel: 513-558-3627 • Office: MSB 4257A • Office hours: By appointment

Lecturer (Module 7): John N Lorenz, PhD • Email: john.lorenz@uc.edu
Tel: 513-558-3097 • Office: MSB 4259 • Office hours: By appointment

Graduate Teaching Assistants: TBA
Office Hours: TBA | Location: TBA

Undergraduate SI Leader: TBA
SI Review Sessions: TBA
Office Hours: TBA | Location: TBA

Supplemental Instruction (SI) is offered for this course by UC's Learning Assistance Center. Students of all academic levels are invited to participate in SI sessions. SI sessions are group-study opportunities scheduled once per week, independently of the workshops. They are facilitated by your SI leader, who is attending class and preparing SI sessions based on the class content. SI sessions utilize a collaborative learning model to aid in comprehension and synthesis of course material and development of effective study techniques. On average, students who regularly participate in SI sessions earn a higher final course grade, as well as higher exam grades, than do students who choose not to participate in SI. Attendance is voluntary and is not a substitute for class attendance.

Registration	Course #	Section	Cred	Class #	Program	Class Schedule	Location
	MCP8050C GRADUATE	007	3 G	50110	26MAS- PHSG-MS	Tue 2:00 – 3:20 pm Wed 2:00 – 3:50 pm	Canvas Conferences Canvas Conferences
		008	3 G	50111	26MAS- PHSG-MS	Tue 2:00 – 3:20 pm Thu 2:00 – 3:50 pm	Canvas Conferences Canvas Conferences

- Learning Outcomes**
1. Calculate the probability of random events
 2. By using probability distributions, judge whether an observation is unlikely to have arisen randomly and whether we can safely declare an effect real
 3. Design powerful experiments in the biomedical sciences, incorporating appropriate controls and accounting for confounding variables
 4. Estimate sample size required for sufficient power and calculate post hoc the power of a statistical test

5. Identify the factors and levels in a multifactorial experimental design, and define the family of comparisons of interest in any experiment
 6. Collect, organize, summarize, analyze, and communicate data honestly and effectively
 7. Make inferences (reach conclusions) about the population(s) when only sample data are known
 8. Select and execute the most appropriate statistical test to make inferences from available data, frame the null hypothesis, and declare the significance of the effect if one exists
- Fit observed data by an appropriate linear or nonlinear function in order to describe physiological phenomena

Assessment

Assessment in this course comprises both formative and summative assessment, intended to provide a holistic view of how well the student is assimilating and synthesizing information, developing both a theoretical and practical understanding of experimental design, statistical analysis and interpretation, and developing critical skills. Formative assessment offers the student continuous feedback and guidance. Summative assessment provides the course director with a means of evaluating knowledge gained and proficiency achieved by the student.

Assessment	Details	Assessment type	Graded/Contribution to overall course grade*
Class Discussion	Class participation ¹	Formative	Required, nongraded
Workshops	Class participation ¹	Formative	Required, nongraded
Office Hours/SI Review Sessions	See Canvas	Formative	Not required, nongraded
Assignments ²	See Canvas	Formative	} Graded (15%)
Pop Quizzes	During lecture	Formative	
Midterm Exam	Multiple-choice test	Summative ³	Graded (25%)
Final Exam Part I	Multiple-choice test	Summative ³	Graded (30%)
Final Exam Part II	Practical	Summative ³	Graded (30%)

¹Required participation includes (1) participating in class discussions on recitation days and (2) presenting solutions to problems given in the weekly workshops. For Workshop 12, students will work within small groups to present a critique of the experimental design, statistical methods and reporting in a published paper, and then submit individually a written critique.

²Assignments will be administered via Canvas. Your assignment must be submitted in Canvas. Late submissions will not be awarded credit.

³Summative assessments will not be made available to the student for review after the exam.

Grading Grades will be assigned as follows, with no adjustment for the distribution of scores.

A	90.0%–100%	B+	82.0%–84.9%	B–	74.0%–76.9%	C*	67.0%–69.9%
A–	85.0%–89.9%	B	77.0%–81.9%	C+	70.0%–73.9%	Fail	Below 67.00%

***NB:** To obtain a passing grade of C or better, you must earn from the three formal examinations (midterm, final part I, final part II) an aggregate score that is equivalent to a satisfactory grade, i.e. 67%. Even if your total score for the course (including regular assignments and any make-up assignments) is $\geq 67\%$, if your aggregate score for the formal examinations is $< 67\%$, you will receive an F grade.

Attendance Attendance (whether online or in-person optional) is required

Auditing Auditing requires advance permission of the Course Director

Web Page <http://med.uc.edu/systemsbiology/studycourse/statistics> or <http://med.uc.edu/msinphysiology/curriculum/statistics-and-experimental-design>

Canvas & Email Policy Announcements and messages sent via Canvas or via UC email will be considered sufficient notice. It is your responsibility to check notification settings in your Canvas account to ensure that you receive announcements. You should not communicate with instructors from a non-UC email account—any such communication will be ignored.

Workshop, Practical Exam, and Required Software You must obtain an appropriate statistical software or be able to access it remotely. SigmaPlot v14 is the recommended software package for use in this course. (Under exceptional circumstances, you may use an alternative software package, see below*.)

Your options for purchasing or remotely accessing SigmaPlot v14:

1. Purchase a UC site-licensed copy of SigmaPlot for \$76 (2021–22), or \$38 beginning January 2, 2022. The license expires June 30, 2022. Visit IT@UC ResNet Software Store at https://secure.touchnet.net/C21575_ustores/web/product_detail.jsp?PRODUCTID=757&SIN_GLESTORE=true
2. Purchase your own personal Student License directly from Systat software. You can purchase a one-year or two-year license for \$100/year at <https://systatsoftware.com/products/sigmaplot/sigmaplot-student-licenses/>
3. Access SigmaPlot remotely at UC's VirtualLab: You can connect to UC's VirtualLab and remotely use SigmaPlot on a UC computer. Be advised that VirtualLab is subject to concurrent-user capacity limits. (i) Save the SigmaPlot data files that you will need on your UC OneDrive; (ii) Go to <https://mydesk.uc.edu> and log in (you do not need to install the client); (iii) Click on the "Student Desktops" icon; (iv) Log in to OneDrive; (v) You will find the SigmaPlot icon on the desktop (after logging in, wait a few seconds before launching SigmaPlot); (vi) Be sure to save your analyses, and export reports or figures (e.g. as jpeg), to your OneDrive.
4. Using a mac: SigmaPlot runs on the Windows OS. To run SigmaPlot on your mac you will have to either (i) use a Windows compatibility layer (e.g. CrossOver Mac) in which you run SigmaPlot, or (ii) partition your disk (using Bootcamp) and install Windows on that partition. More information: <https://systatsoftware.com/products/sigmaplot/run-sp-on-a-mac/>

***Using an alternative statistical software package:**

Minitab, SAS, SPSS, and SYSTAT input data formats are supported in SigmaPlot. You may elect to use an alternative statistical software package (e.g. Minitab, Prism, R environment, SAS, SPSS, SYSTAT) instead of SigmaPlot. Should you choose to do so you acknowledge the following: (1) no provision will be made to ensure that data files are compatible, (2) you are responsible for any reformatting or reorganization of data that may be required, (3) following along at the workshop may be difficult; and (4) no troubleshooting or instruction will be provided for alternative software. Can you guess, I do not recommend this option? But it's a free world.

Textbooks Reference to textbooks and online eTexts is strongly recommended as you study for this course. Each module lists/links additional reading material. Some recommended eTexts are linked from the Blackboard class under Web Resources → eTexts and Applets. Recommended textbooks include:

Philip Rowe (2016) *Essential Statistics for the Pharmaceutical Sciences, 2e*, Wiley, Chichester

ISBN: 9781118913383 (cloth)

ISBN: 9781118913390 (paperback)

ISBN: 9781119109075 (e-book)

Free online access (on-campus or connected to UC via VPN):

<http://onlinelibrary.wiley.com/book/10.1002/9781119109075>

A very accessible, easy-to-read textbook *Essential Statistics* will help you gain a solid understanding of statistics and good practice. Rowe walks the reader through the most common statistical tests and is careful to point out the many pitfalls that researchers can encounter.

Robert Riffenburgh (2013) *Statistics in Medicine, 3e*, Academic Press/Elsevier, San Diego
ISBN: 9780123848642 (hardback)
ISBN: 9780123848659 (e-book)
Free online access (on-campus or connected to UC via VPN):
<http://www.sciencedirect.com/science/book/9780123848642>

A thorough and comprehensive statistics manual for biomedical and clinical research, *Statistics in Medicine* will also serve as an excellent reference for many of the tests that are beyond the scope of this course.

Special Needs Policy If you have any special needs related to your participation in this course, including identified visual impairment, hearing impairment, physical impairment, communication disorder, and/or specific learning disability that may influence your performance in this course, you should meet with the instructor to arrange for reasonable provisions to ensure an equitable opportunity to meet all the requirements of this course. At the discretion of the instructor, some accommodations may require prior approval by Disability Services.

Academic Integrity Policy The University Rules, including the Student Code of Conduct, and other documented policies of the department, college, and university related to academic integrity will be enforced. Any violation of these regulations, including acts of plagiarism or cheating, will be dealt with on an individual basis according to the severity of the misconduct.

Counseling Services Students have access to counseling and mental health care through the University Health Services (UHS), which can provide both psychotherapy and psychiatric services. In addition, Counseling and Psychological Services (CAPS) can provide professional counseling upon request; students may receive five free counseling sessions through CAPS without insurance. Students are encouraged to seek assistance for anxiety, depression, trauma/assault, adjustment to college life, interpersonal/relational difficulty, sexuality, family conflict, grief and loss, disordered eating and body image, alcohol and substance abuse, anger management, identity development and issues related to diversity, concerns associated with sexual orientation and spirituality concerns, as well as any other issue of concerns. After hours, students may call UHS at 513-556-2564 or CAPS Cares at 513-556-0648. For urgent physician consultation after hours, students may call 513-584-7777.

Title IX Title IX is a federal civil rights law that prohibits discrimination on the basis of your actual or perceived sex, gender, gender identity, gender expression, or sexual orientation. Title IX also covers sexual violence, dating or domestic violence, and stalking. If you disclose a Title IX issue to me, the course director, I am required to forward that information to the Title IX Office. They will follow up with you about how the University can take steps to address the impact on you and the community and make you aware of your rights and resources. Their priority is to make sure you are safe and successful here. You are not required to talk with the Title IX Office. If you would like to make a report of sex or gender-based discrimination, harassment or violence, or if you would like to know more about your rights and resources on campus, you can consult the website www.uc.edu/titleix or contact the office at 513-556-3349.

Course Format The course comprises a weekly lecture (Tuesdays 2:00 – 3:20 pm) followed by a weekly workshop (you will attend *either* Wednesdays 2:00 – 3:50 pm *or* Thursdays 2:00 – 3:50 pm).

Module 1 Introduction to Statistics I: Basic Concepts; Probability and Distributions

Module 2 Introduction to Statistics II: Descriptive Statistics; Hypothesis Testing

Module 3 Between-Group Inferences I: Student's *t* Tests (One-Sample, Two-Sample, Paired)

Module 4 Between-Group Inferences II: Nonparametric Testing (Rank-Sum Test, Signed-Rank Test, and Sign Test)

Module 5 Between-Group Inferences III: Chi-Square Test, Fisher's Exact Test, and Analysis of Frequencies; Odds Ratios and Relative Risk; ROC Analysis

[Module 6](#) Between-Group Inferences IV: Analysis of Variance and Multiple Comparisons

[Module 7](#) Experimental Design; Multifactorial Analysis

[Module 8](#) Survival Analysis; False-Discovery Rate Procedure; Permutation Methods; Normalization; Analysis of qPCR Data

[Module 9](#) Power Analysis; Sample-Size Estimation; Transparency, Rigor and Reproducibility

[Module 10](#) Multiple Linear Regression; Model Improvements

[Module 11](#) Statistical Reporting, Data Presentation, and Graphic Integrity

[Module 12](#) Critiquing Experimental Design and Statistical Analyses of Published Articles

[Module 13](#) Review
